

SYSTEM INITIALIZATION // YOUR ORIGIN STORY BEGINS HERE

NAVIGATING HEALTHCARE'S BRAND NEW DAY

Equip yourself for the AI era. Evolve from a digital user to a healthcare innovator.

A/Prof. Kevin Yap
Mr. Lee Kow Jun

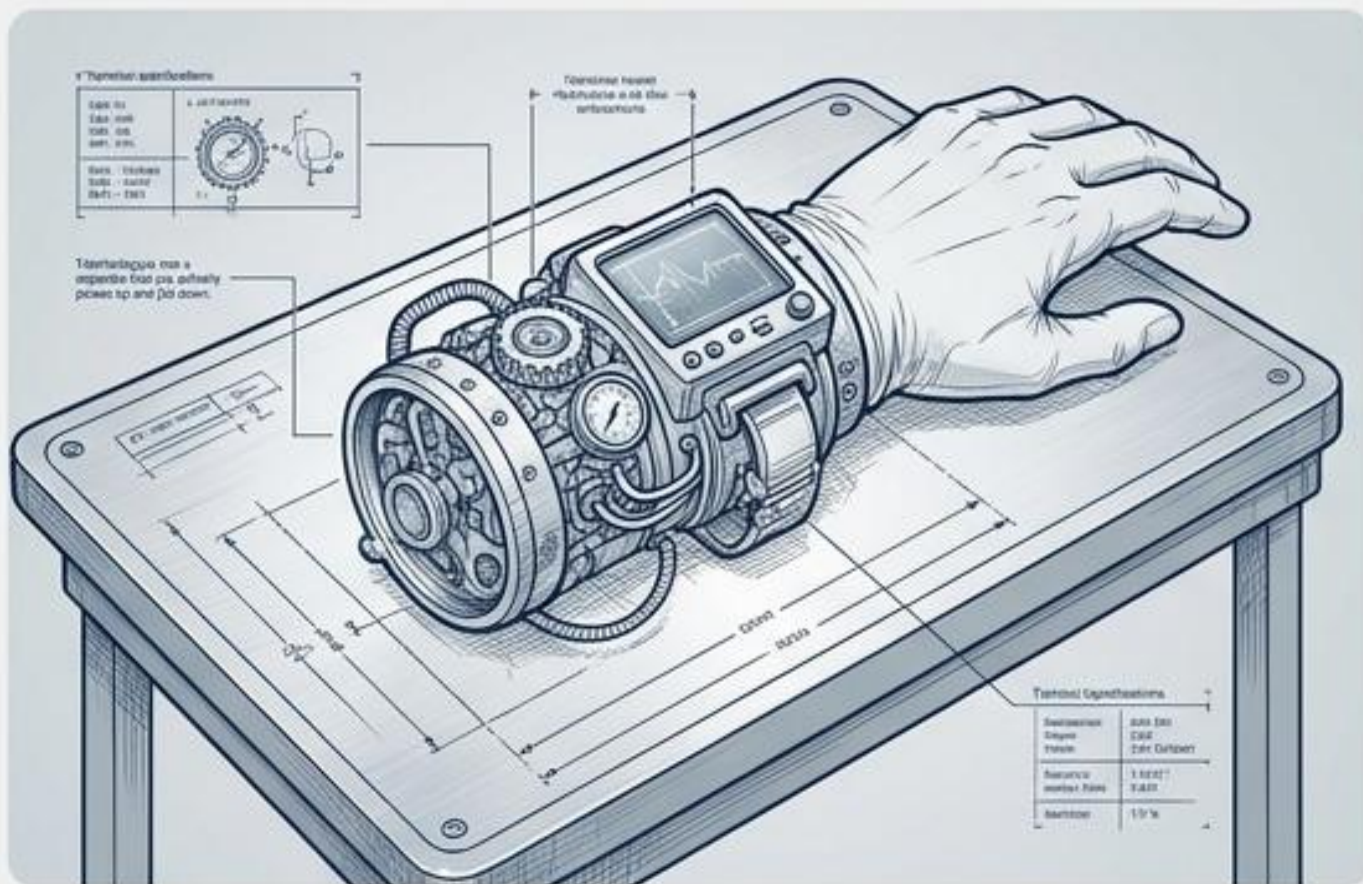

LEVEL 1000 MODULE

NUR1131: Digital Health & AI
in Healthcare Practice

FROM CONSCIOUS TOOL TO INSEPARABLE SUPERPOWER

THE PAST

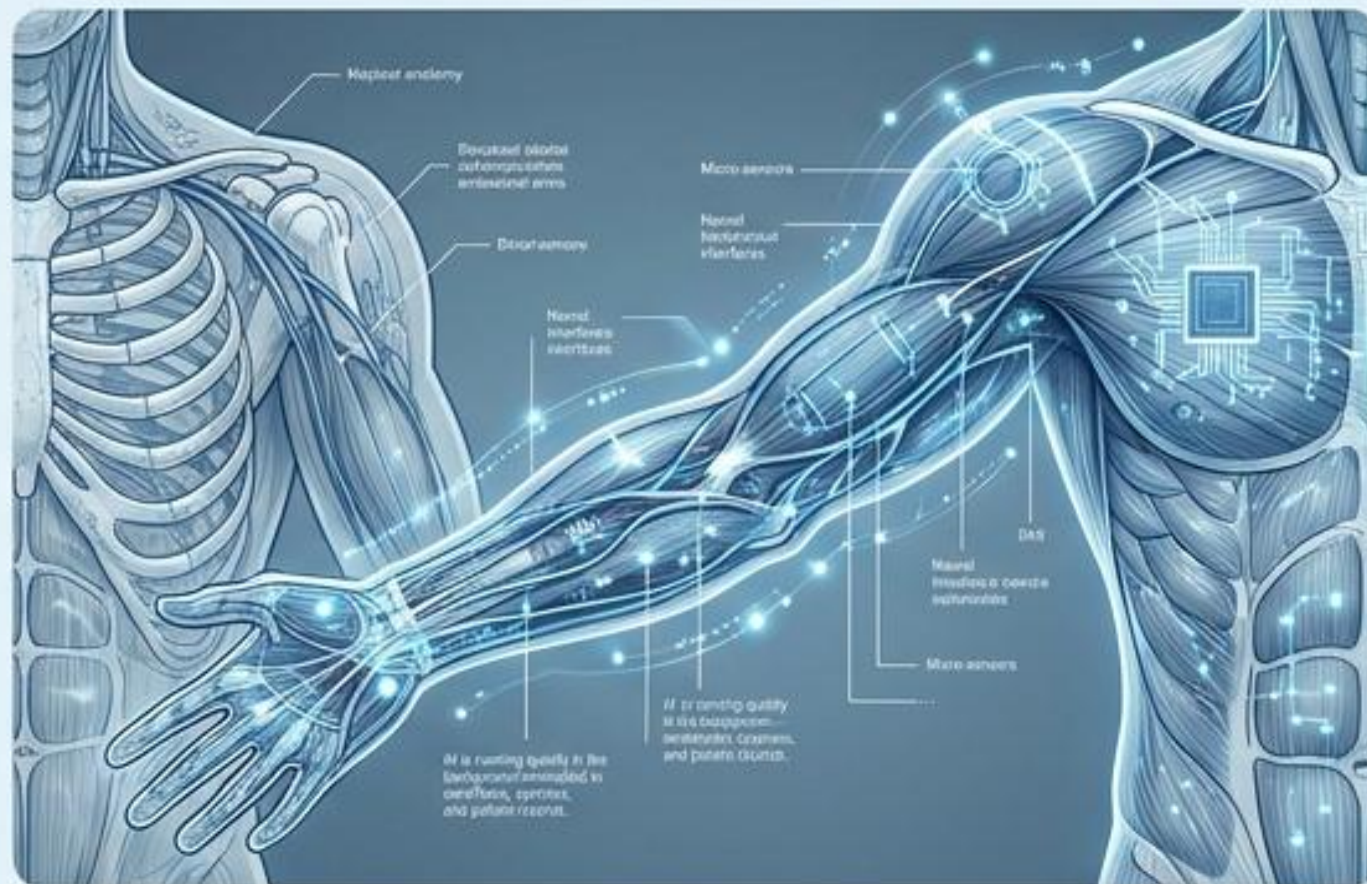

The Assisted Tool

Technology was a separate tool you actively picked up and put down.

THE FUTURE

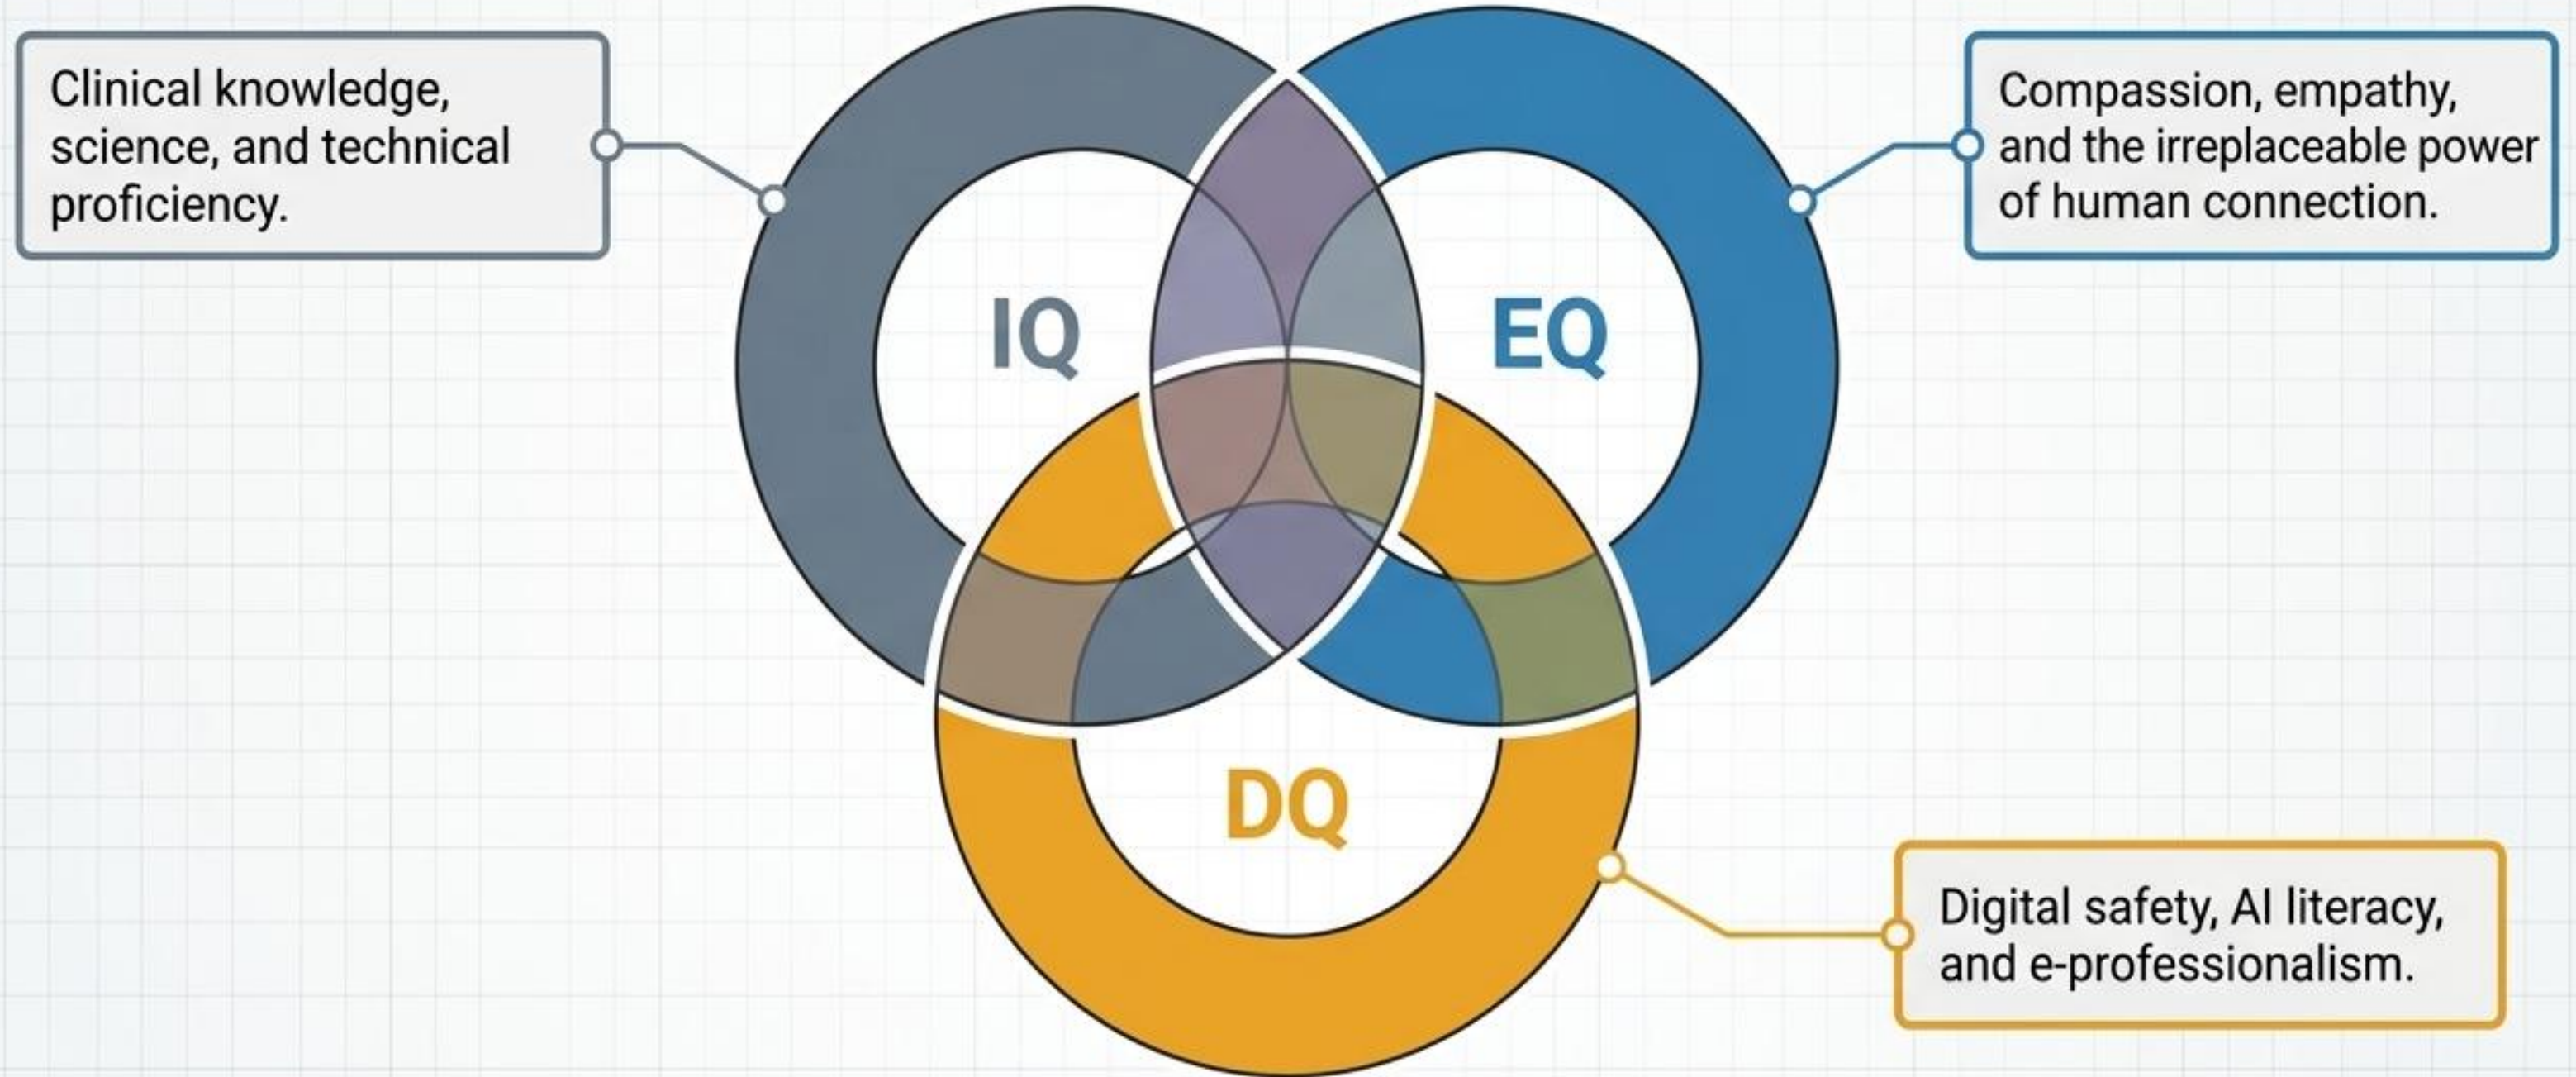

The Embedded Capability

AI is running quietly in the background—embedded in workflows, systems, and patient records.

The question isn't whether AI is here. It's how you wield it. With great power comes greater responsibility.

THE 3RD INTELLIGENCE

You are trained in science and human compassion. But in a technology-enabled healthcare system, traditional skills are incomplete without Digital Intelligence.

CULTIVATING YOUR SPIDER-SENSE

AI can hallucinate, exhibit bias, or lack human context. You are the ultimate human safeguard.

01 // Sense-Makers

Interpret AI outputs through the lens of real-world clinical experience and patient context.

02 // Safeguards

Challenge, document, override, and aggressively escalate unsafe or inaccurate algorithmic outputs.

03 // System-Shapers

Define clinical problems, design workflows, and determine what digital success actually looks like.

THE SENSE-MAKER'S DIAGNOSTIC

Before trusting any AI or digital tool, apply the **N.U.R.S.E. test**:

N

Need

Does the AI address a genuine, important problem in clinical practice?

U

Usability

Will it actually work with your target populations and workflows?

R

Reliability

Is it accurate, validated, and tested in a setting like yours?

S

Safety

Can you question, report, and seamlessly override unsafe outputs?

E

Escalation

Is there a clear, immediate pathway to act on what the AI tells you?

A PARADIGM SHIFT IN NURSING EDUCATION

TRADITIONAL MODULES

- Focuses on content retention and existing protocols.
- Teaches you how to react to technology.
- Prepares you to be a digital user.

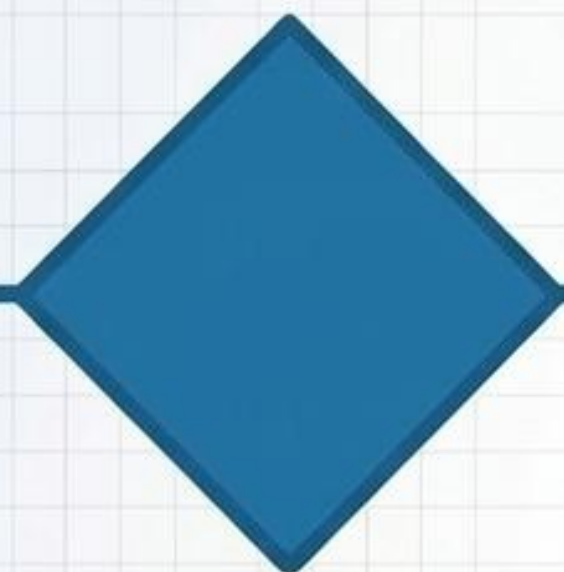

THE NUR1131 BLUEPRINT

- Focuses on evaluative judgment and managing rapid change.
- Teaches you how to innovate with technology.
- Empowers you to be a digital creator and safeguard.

This is not about learning how to click buttons.
This is about learning how to command the system.

THE TRAINING PROTOCOL: BUILDING YOUR BASELINE

PHASE A: Can I trust it?

Making Sense of Data & AI

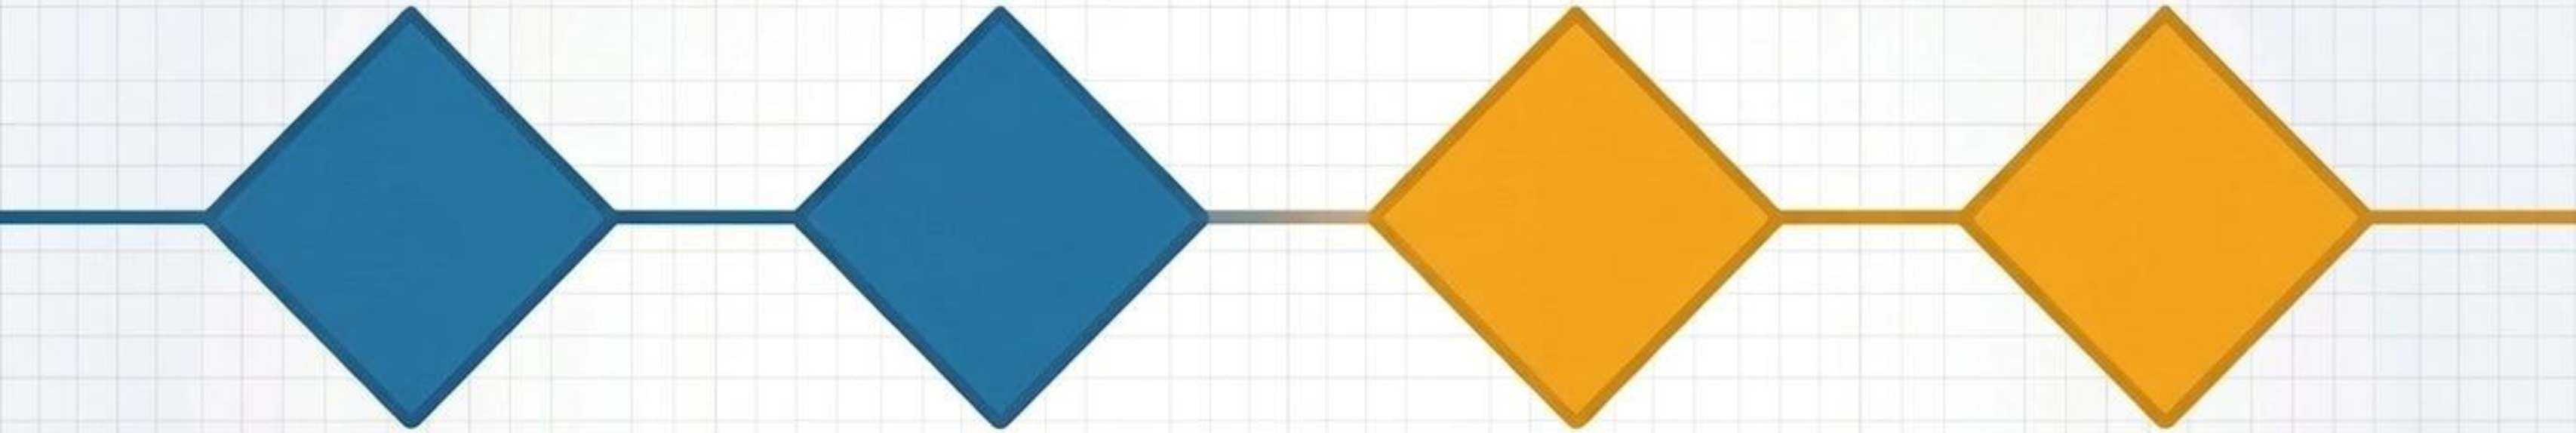

Decode the global digital health landscape. Master data governance and understand the building blocks of trustworthy, responsible AI in clinical ecosystems.

PHASE B: Can I judge it?

Evaluating Digital Tools & LLMs

Hone your evaluative judgment. Apply clinical frameworks to ruthlessly assess the accuracy, safety, and validity of large language models and digital health platforms.

THE TRAINING PROTOCOL: BECOMING THE INNOVATOR

PHASE C: What's my responsibility?

AI Ethics & Cybersecurity

Navigate the shadows of data privacy. Learn to manage digital footprints and forge an unshakeable e-professional identity in a hyper-connected world.

**PHASE D: Can I shape it?
From User to Innovator**

Apply design thinking. Discover exactly why nurses are best positioned to architect the next generation of digital health solutions.

TECHNOLOGY CHANGES. THE PURPOSE DOES NOT.

Florence Nightingale's lamp was a symbol of vigilant presence and compassionate care. Today, that lamp is evolving into a glowing screen. But the mission remains identical: to illuminate the path to healing, ensure safety, and advocate for those who are vulnerable.

Equip yourself to be the guiding light in a complex digital ecosystem.

ACCESS YOUR BRAND NEW DAY

The future of healthcare doesn't just need nurses.
It needs Sense-Makers. It needs Safeguards.
It needs Innovators.
Are you ready to level up?
